

Architectural Technicians/Glazing Technicians

You must be motivated to undertake varied, complex and accurate work using AutoCAD and/or Inventor. Experience using propriety and bespoke glazing systems preferred. However we will give consideration to applicants with experience in other areas of design and detailing that have the enthusiasm and drive to develop their skills within our diverse business.

You will be responsible for the preparation of complete concept and submittal of drawings, providing dimensional checks, maintain part drawings and logs. You will work closely with Engineering and Management professionals to produce custom fabrication drawings, anticipate and troubleshoot areas of concern and resolve engineering issues prior to fabrication.

We feel this is a good opportunity for an ambitious individual who wishes to learn and grow with an exciting and professional organisation.
