

Structural Engineer/Designer

You must be able to evaluate and create technical solutions during the promotional/sales stage whilst ensuring the design intent, budgets and programme are met during the execution of contracts.

Your duties will include checking structural performance, preparing calculations, material specification and selection whilst keeping to the client's budgetary requirements.

This is a hands-on engineer's role. You will be expected to work within a small team on projects featuring predominantly steel, timber and glass.

You should be qualified to Degree level or be Chartered Status, and be familiar with AutoCAD and 3D design analysis programmes.

We feel this is a good opportunity for an ambitious individual who wishes to learn and grow with an exciting and professional organisation.
